

Audience Creation ^[1]

March 29, 2024 by [Melanie Jones](#) ^[2]

A crucial role of an eComm Specialist is to create audiences. Before diving into the multi-step process, it's important to have a basic understanding of terminology and the end-user experience.

- [Salesforce Data Model](#) ^[3]
- [Standard vs. Individual Contacts](#) ^[4]
- [Salesforce Campaigns & Reports](#) ^[5]
- [Sharing Salesforce Report Folders](#) ^[6]
- [Marketing Cloud Data Extensions](#) ^[7]
- [Send Marketing Cloud Email](#) ^[8]
 - [Unsubscribes](#) ^[9]

APPLY YOURSELF

Make a copy of the [eComm Specialist Training Plan](#) ^[10] for the opportunity to apply each step.

Check out a spreadsheet that can serve as a checklist when creating a new audience so you don't miss any minor step ^[11].

1) Create Campaign (if applicable)

If a user provides a list of folks to email, you'll need to create a Salesforce Campaign (share it) and add Campaign Members ^[12]. eComm Specialists can add Campaign Members to a Campaign in bulk using Apsona or one by one.

[Salesforce Campaign Wiki](#) ^[12]

Use your copy of the eComm Specialist Training Plan to create 11 different Campaigns and practice uploading Campaign Members. Each tab (Campaign 1-11) contains a test data set to upload. Paste the Campaign URL into C1 of the respective tab.

Reporting on Email and Event Campaigns is the same - the only difference is Event Campaigns are automatically created via a Cvent-Salesforce Integration ^[13] while Email Campaigns are created manually.

2) Create Report (required)

A Report is how an audience is captured in Salesforce for a Marketing Cloud email to deliver to. Salesforce Reports are based on [Salesforce data](#) [3] - this could be the Campaign created in step one or data from a source system (examples below). Use the [Reporting wiki with templates for common audience queries](#) [14]. Each template can be customized to specify your targetted population further.

[Salesforce Report Wiki](#) [14]

Examples of Reports based on Campaigns:

- Donors who gave to a specific fund
- People who walked into my office today
- Prospective Students
- Event Registrants (if using Cvent, this Campaign is automatically created via an integration)

All of these populations must leverage Campaigns. In other words, they do not exist in Salesforce as a data point from a source system, so this data must be uploaded (via Campaigns and Campaign Members).

Examples of Reports based on Source System Data:

- UCCS Degreed Alumni
- Active CU Denver Business School students
- System Employees

All of these populations can be queried in Salesforce based on data integrated from a source system.

*Use your copy of the eComm Specialist Training Plan to create a variety of Reports. Navigate to the tab labeled **Reports** to use the description in Column A to create a Report (paste the URLs in Column C).*

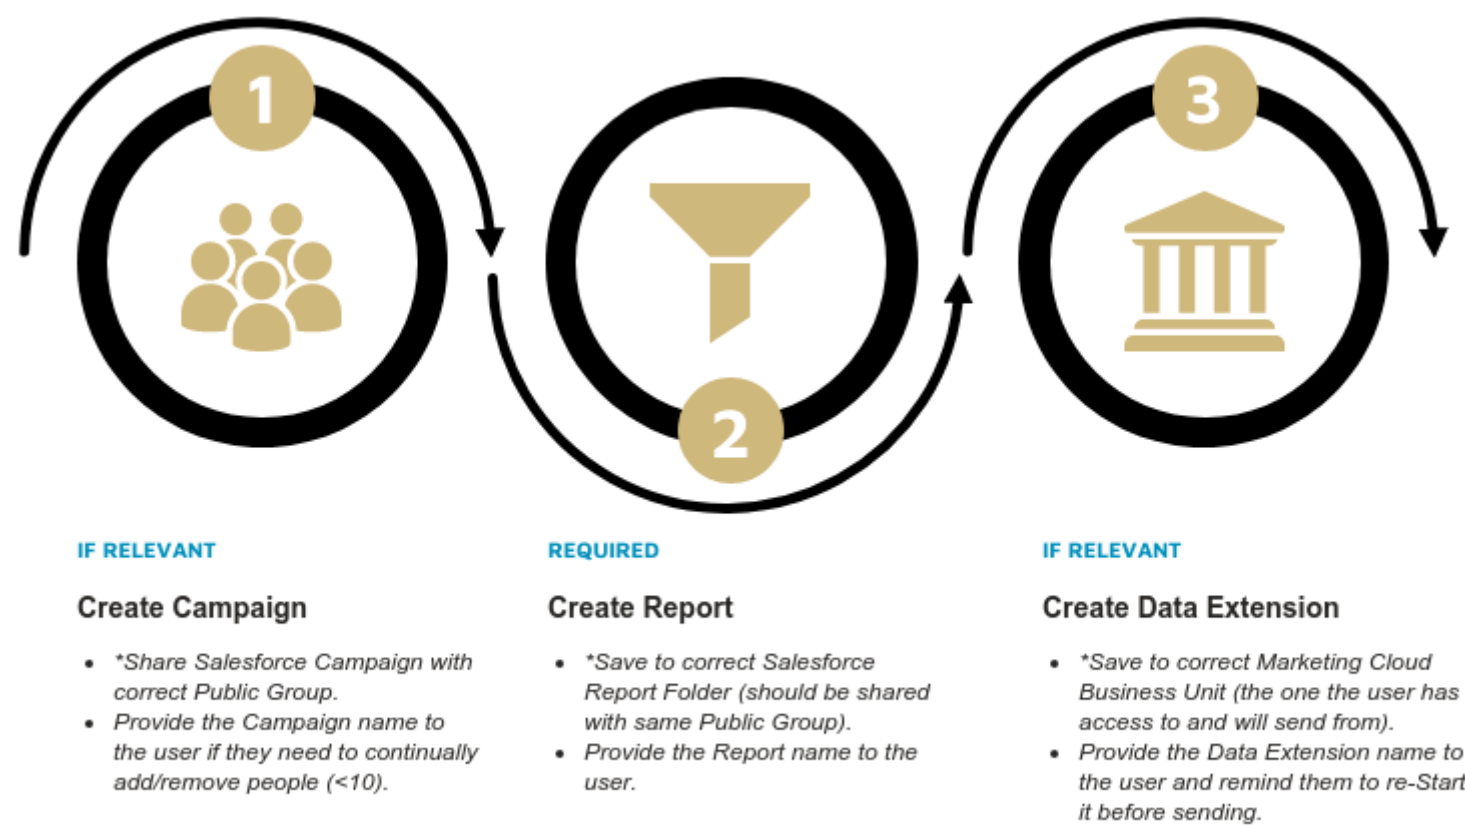

3) Create Data Extension (if applicable)

If the communication is intended for internal audiences (faculty, staff, or students), you'll want it delivered to their campus email addresses (e.g., @colorado.edu, @ucdenver.edu, @cu.edu, or @uccs.edu). To do so, you'll need to send to a Data Extension. An eComm Specialist will [create the Data Extension](#) [15], but it's the sender's responsibility to re'Start' it before each send.

[Data Extension Wiki](#) [15]

Use your copy of the eComm Specialist Training Plan to create Data Extensions. See the tab labeled **Data Extensions** and paste the Data Extension name in Column E.

It's also possible to upload external data from a CSV file into a Data Extension [16].

**Failure to share or save correctly will prevent the user from being able to send.*
