Employee Pay: What Stops It?

A number of actions will stop an employee's pay, such as:

- termination
- short work break
- leave without pay
- suspension

Actions that do not stop pay include changes to:

- existing position data
- position data that is in proposed status
- funding expiration.

Additionally, most job data updates will not stop pay, with the following exceptions:

- appointment end date, unless accompanied by an action that terminates the employee or puts the employee on a short work break*
- unapproved transactions to an employee's job data.*

See also - [What Stops Employee Pay?](#) ^[1]

*For detailed information on job data updates that will or will not stop pay, see the [Automatic Termination Process](#) ^[2].

Several reports are available to assist in monitoring these actions and how they affect employee pay. Running and reviewing these reports on a regular basis provides an opportunity to prevent problems with payroll before there is a significant impact to the employee.
