List of Available CU Queries and Tables

Use this Excel spreadsheet below to find a complete list of available PSQueries created for business partners to use in the Human Resources Management System (HRMS)

The first spreadsheet tab, "CU Delivered Queries," contains:

- an alphabetic list of available queries;
- any HRMS-role security restrictions (Use the [HRMS Security Access Request Form](#) [1] to obtain higher PSQuery role access.);
- a broad description of the query's output; and
- a cross-reference to the former PeopleSoft SQR report.

The remaining tabs contain the HRMS Tree Name and Tree Node definitions for the levels of PSQuery security within the HRMS.
