

THINK ABOUT PHYSICAL SECURITY COMRADES

You need more than just a killer password to make sure identity stays safe. Sometimes the easiest ways for a criminal to steal your information are right here in the real world.

Your desk is an easy target for someone looking to steal or scan valuable information. Your Darth Vader bobblehead and dirty coffee mugs can stay, but do yourself a favor and lock up those important files and log out when you're away. If you throw anything out, make sure that it's shredded or physically destroyed.
