

PeopleTools | Homepage Enhancements

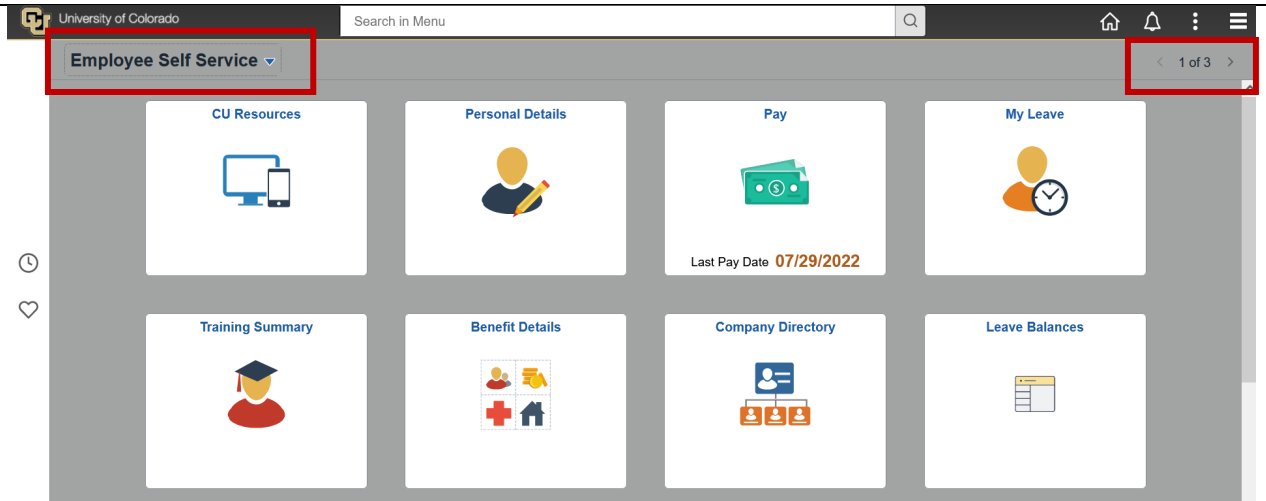

The latest PeopleTools upgrade includes Homepage enhancements that make it easier to navigate to the data and transactions that are most important to you.

Note: The first three features are available only on the fluid homepages, and not on dashboards or navigation collections.

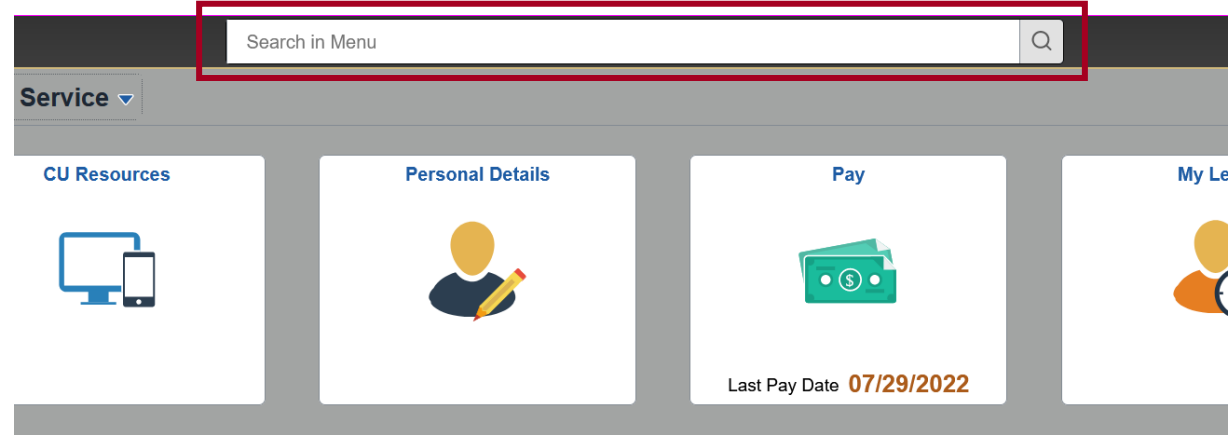

Homepage Navigation: To navigate between your homepages, you can use the **homepage selector** dropdown on the top left or the **Next >** and **Previous >** buttons of the new homepage navigator on the top right.

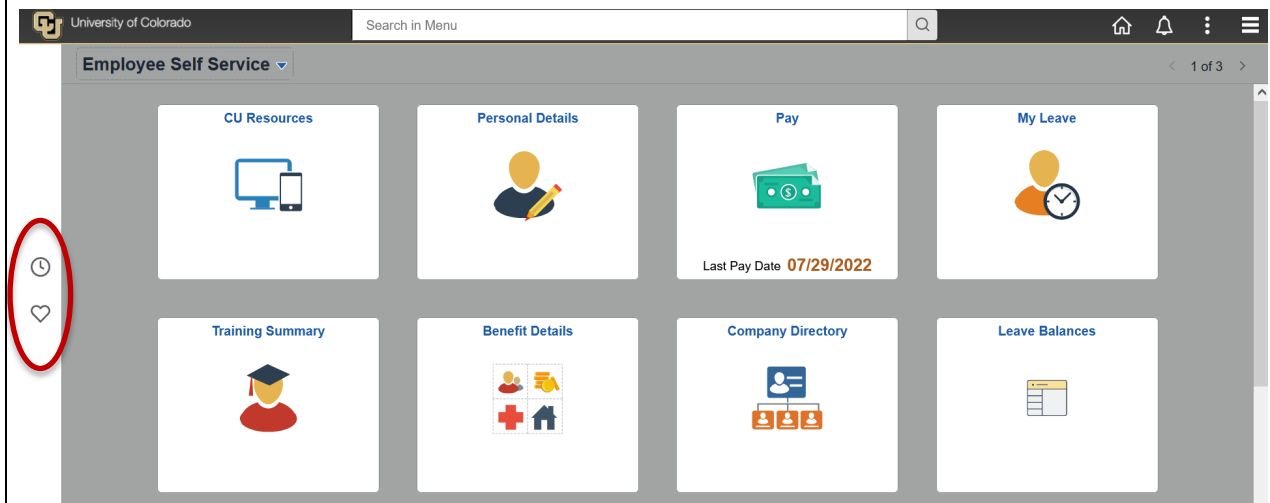

The **homepage selector** dropdown was previously in the middle of the top bar, where the Global Search bar is now.

A **Global Search bar** appears in the homepage's top center banner and is always available. Clicking in the search field will display search suggestions that are narrowed as you type.

On the far left, you will find a **Quick Access Bar**, which provides one-click access to your favorites (the heart icon) and most recently visited items (the clock icon).

Notifications are displayed in the same place as before. Instead of a red dot detailing the number of notifications, you will see a red dot with an exclamation point to alert you to new notifications.
