

Import File to Data Extension ^[1]

April 23, 2025 by [Melanie Jones](#) ^[2]

NOTE This task requires assistance from your [eComm Specialist](#) ^[3].

Learn how to create a Data Extension as you typically would, then Import over the data from a file. Just remember, you'll need the Contact 18 ID to Import successfully.

There are numerous use cases for importing data into a Data Extension, including but not limited to the following. Expand the '2 | Create File' section below for full details on these nuanced, common examples.

- **Adding data that doesn't exist in Salesforce**
 - such as salutation for personalization (like Mr. & Mrs. Jones), although it could be any data
 - a piece of information to drive dynamic content in an email
 - adding unique URLs for each recipient (e.g., for tracking purposes or a unique survey link)
- **Overwriting Existing Data**
 - Merge multiple Data Extensions (with different University emails) into a single Data Extension
 - Incorrect Emails in Salesforce

Call for Help Importing a file over a Data Extension is simple in theory but more difficult when put into practice the first time. There are some small intricacies that will vary, depending on your use case. Feel free to arrange 30 min. with Melanie Jones to walk through it together.

1 | Create Data Extension

The goal is to create a Data Extension as usual. Access the Marketing Cloud Business Unit that the message will be sent from and configure the Data Extension. There is no need to 'Start' the Data Extension once created.

- 1A | Prepare Report
- 1B | Create Data Extension

Required Fields:

- Contact ID

- Primary Email (or any Email field)
- Other personalization fields (like First Name)
- Contact 18 ID

Create a Data Extension

Your Data Extension should be configured like the following:

- **Contact ID=Key**
 - **Primary Email Field=Email Address**
 - Include any fields used for personalization or dynamic content
 - DO NOT INCLUDE the **Contact 18 ID** in the Data Extension
-
- Set to **Overwrite**
 - Click **Save** at the top
 - There is no need to Start the Data Extension since you will import a file to the Data Extension in step 3.

Add Column to Data Extension

With the basic Data Extension created, you need to add another column to house the data that you wish to upload. To manually add a new column to a Data Extension:

- Navigate to **Subscribers >> Salesforce Data Extension**
 - Open the Data Extension you created
 - Add a field by working in the Fields box in the bottom right
 - Click the **Edit Fields** button
 - Click the **Plus icon**
-
- Name the new field as you wish (ie External Data below)
 - If the value is text, keep the **data type as text** (most common)
 - Ensure the **length** number is larger than the number of characters in the field being uploaded
 - Check **Nullable** if this value can be blank
 - Provide a **Default Value** if you wish
 - Click **Save Fields** in the top-right

Data Type = Currency The currency field is necessary when adding numbers with a comma (s) (e.g. 1,234.56). Add the currency sign (\$) to the body content rather than in the Data Extension field. If you use Data Type = Text, a number with a comma will be rejected.

Fields					
Name	Data Type	Length	Primary Key	Nullable	Default
Contact ID	Text	255	<input checked="" type="checkbox"/>	<input type="checkbox"/>	
First Name	Text	255	<input type="checkbox"/>	<input checked="" type="checkbox"/>	
Last Name	Text	255	<input type="checkbox"/>	<input checked="" type="checkbox"/>	
SYS Email	EmailAddress	100	<input type="checkbox"/>	<input checked="" type="checkbox"/>	
External Data	Text	50	<input type="checkbox"/>	<input checked="" type="checkbox"/>	

2 | Create File

There are many ways to prepare to upload a file to a Data Extension.

- Prepare a spreadsheet with columns including:
 - 18-digit contact ID
 - Email
 - These values can vary in the domain
 - Other personalization fields
 - External data to add
- Save as a CSV or TXT

XLOOKUP Function

- Oftentimes, your file will need to be created by merging a Salesforce Report (with the 18-digit contact ID, email address, first name & last name) with an external file including custom information. The XLOOKUP function plays an important role in merging two sheets into a single sheet to be imported.
 - Excel
 - [XLOOKUP Function Video | 44 seconds](#) ^[4]
 - [XLOOKUP Details](#) ^[5]
 - Google Sheets
 - [FILTER Function](#) ^[6]

See three use cases below for importing a file:

- Adding External Information
- Incorrect Email in Salesforce
- Merge Many Data Extensions

Some users wish to have external information included in their Data Extension. This could be a custom salutation for personalization (like Mr. & Mrs. Jones), a piece of information to drive dynamic content in an email, or adding unique URLs for each recipient.

1. Create a Report with the required columns and export:
 - 18 Digit Contact ID
 - University Email
 - field used to merge files (step 2 below)
 - other personalization fields
2. Use XLOOKUP function to merge an external file with the exported Salesforce Report
3. Save as a file with columns labeled

Adding External Information for AMPscript

- While uploading external details to a Data Extension to create custom emails with AMPscript is a valid use-case, it is not supported by eComm. Users with AMPscript experience are welcome to explore this functionality, noting eComm will not be able to provide resources or support.

Some of the campuses recently noticed many employees/students have an incorrect/missing email in their university email field. This issue stems from the source system (Campus Solutions or HRMS) and takes time to remedy. As an immediate work-around, you can Import over the Subscribers in Marketing Cloud that have incorrect/missing emails.

- Create a Report with the respective University Email Field
 - **Required Columns** include: 18-digit Contact ID, University Email, and other personalization fields
- **Export** Report
- Manually input new email addresses in place of the incorrect ones
- **Save** as a file with columns labeled

Merge multiple Data Extensions (with different University emails) into a single Data Extension.

Employee Services is a good example of using this Import feature. Typically, when they email across the campuses, they send to four different Data Extensions to target four different university emails. We can essentially merge those into one Data Extension so they can leverage A/B Testing and Journey Builder (which don't support including multiple data

extensions).

1. Download and open the file
2. Look for past 401(a) reports in SF
 - o Save As a new report
 - o Rename the report with the date and add the description
3. Open old campaign
 - o Clone campaign
 - o Rename the campaign with the date
 - o Share the campaign with the Employee Services Public Group
 - o Update campaign name in SF report filter
4. Excel file
 - o Add Campaign column > copy and paste campaign ID
 - o Add Status column = Sent
 - o Copy and paste all columns
5. Apsona
 - o Campaign Members > Tools > Import
 - o Copy and paste from Excel file
 - o Add=no checking > Tab > Next
 - o Map *Employee ID*
 - o Map *Campaign ID*
 - o Map *Status*
 - o Download any rejections. Sometimes Employee ID is wrong.
6. Go to the Salesforce report and campaign, and make sure the total number matches
 - o Export a report for each campus using the filters
 - o Save as a file (CSV or TXT)
 - o Make sure there aren't blank email addresses. If there are, look them up in SF and add the email address if they have a campus address.
 - o Copy from the campus email column and paste it into the email column (keep it all in one Excel file)
 - o Do this process for each campus (1, 5, 2 & 3 & 6, 4). Usually, there won't be anyone for the System, but be sure to check.
 - o Copy and paste all columns to the first exported file, and make sure to copy and paste the campus emails into the email column.
7. Go to Marketing Cloud to create the data extension
 - o Open Employee Services BU
 - o Email > Interactions > Import > Create

[image]

1. Put DO NOT RUN in DE description
2. Salesforce Objects & Reports > Search Report
3. Campaign Name, Contact ID, First Name, Last Name, Email
4. Contact ID is Key
5. Update Email type to Email Address
6. Save & Start
7. Go to DE in Salesforce Data Extensions > DE > Records Tab > Import > Select excel file

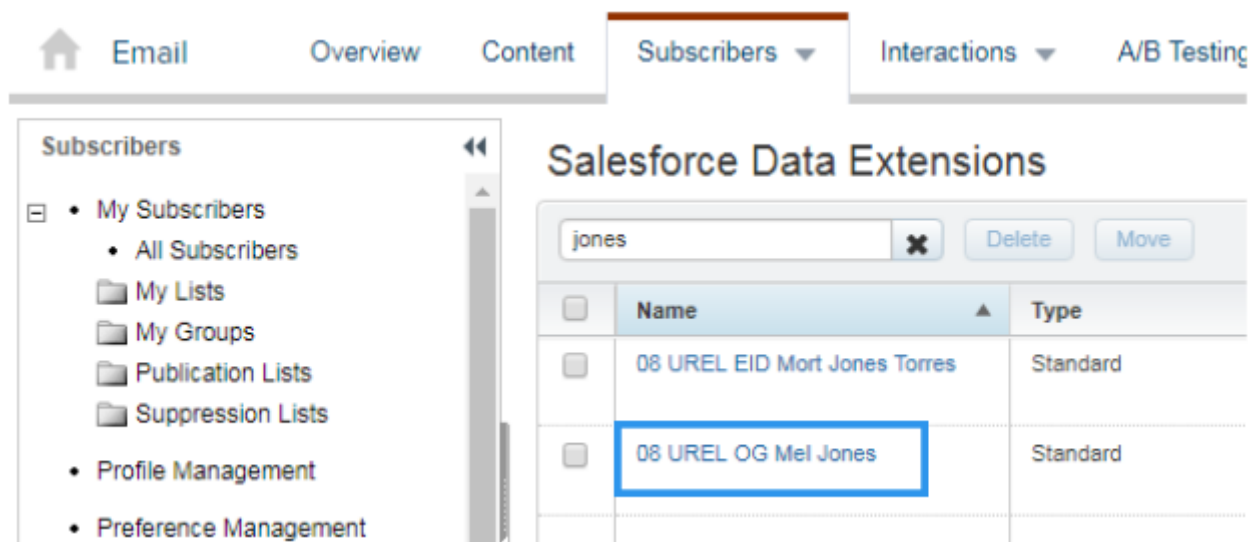

[image]

[image]

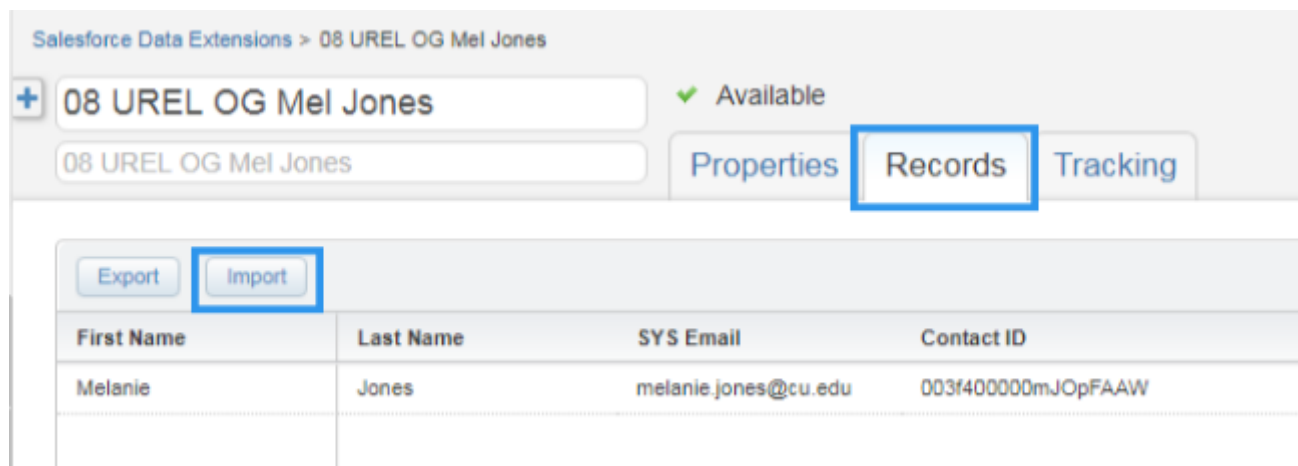

1. Double-check check import and make sure there aren't personal email addresses
2. Move DE to Shared Items > Employee Services folder

3 | Import File to Data Extension

- Navigate to **Content Builder**
- Hover **Subscriptions**, then drill into **Salesforce Data Extensions**
- Select your Data Extension name to open details

- Select tab two titled **Records**
- Click **Import** in the top left

- 3A | Upload File
- 3B | Configure Mapping

- 3C | Review & Import

- **File:** Find your saved file
- **Delimiter:** Comma or Tab (depending on the file type)
- **Date Format:** Leave as Default - English
- **Import Type:** IT DEPENDS
 - Overwrite (most common) | Removes existing records and overwrites with file data
 - Add & Update | Add new records and update existing, will not remove existing
 - Add Only | Add new records, do not update or remove existing records
 - Update Only | Update existing records, do not add new or remove existing records
- **Import Options:** Leave as Default - do not check/uncheck anything

The screenshot shows the 'Import Into Data Extension' dialog box, specifically the 'Review & Import' step. The dialog has a progress bar at the top with three steps: '1 Upload File', '2 Configure Mapping', and '3 Review & Import'. The main content area is divided into two sections. The top section contains fields for 'Data Extension' (08 UREL OG Mel Jones), 'File location' (radio buttons for 'My Computer' and 'FTP', with 'My Computer' selected), 'File*' (a text box containing 'es test.csv' and a 'Browse...' button), and a 'Compressed' checkbox. The bottom section contains 'Delimiter*' (radio buttons for 'Comma', 'Tab', and 'Other' with a text box, with 'Comma' selected), 'Date format' (a dropdown menu showing 'English (United States)' with an example '8/23/2019 10:50 AM'), 'Import type' (a dropdown menu showing 'Add and Update'), and 'Import options' (checkboxes for 'Skip rows in import file with bad data' (checked) and 'Respect double quotes as a text qualifier' (unchecked)). On the right side, there is a 'Supported File Type' section with text: 'Your import must be a delimited, or otherwise delimited, or otherwise delimited. If file size exceeds 20MB, use the FTP option.' At the bottom left, there is a 'Cancel' button.

- Select **Next** in the bottom right

STEP 1 | Create Data Extension The Import Type you chose here (Step 3A | Import file Type) depends on your desired outcome. This will also impact if you Start your Data Extension in Step 1 or not.

Select **Map Manually**:

- Contact 18 ID=Contact ID
- Email=Email
- Other fields=other fields

Import Into Data Extension

1 Upload File 2 **Configure Mapping** 3 Review & Import

☐ Map by Header Row ☐ Map by Ordinal ☒ **Map Manually**

"es test.csv"	Data Extension Columns
Required	
Contact 18 Id	Contact ID (Text)
Optional	
First Name	First Name (Text)
Last Name	Last Name (Text)
Email	SYS Email (Email)

es test.csv
Rows: 1
Columns: 4
Size: 94 Bytes

Cancel

- Select **Next** in the bottom right
- Review your Import details
- Select **Import** in the bottom right
- You'll receive an email notice once complete. Confirm it is successful.
 - *Failed Imports often read a case-sensitive issue. Confirm you are importing a file with Contact 18 ID rather than just the Contact ID (15-digit).*

WARNING

Do NOT restart your Data Extension after completing the import. The data you just imported will be overwritten.

4 | Add Personalization to Email & Test

- To add personalization, click into the content block of the email
- Select the **Personalization icon** and click **Choose New Data Source** in the dropdown

The screenshot shows the 'Edit Email' interface in Salesforce Marketing Cloud. The top navigation bar includes 'Email', 'Overview', 'Content' (selected), 'Subscribers', and 'Interactions'. Below this is a sub-navigation bar with 'Edit Email' and 'New User Credentials'. A secondary bar shows 'Properties', 'Content' (selected), and 'Preview and Test'. The main workspace has tabs for 'Content', 'Block Settings', and 'HTML Editor'. A message 'Block not saved' is visible. The 'Content' tab contains a rich text editor with various formatting tools. The 'Personalization' icon (a person) is highlighted with a green box, and its dropdown menu is open, showing a list of 'Profile Attributes' and a 'Choose New Data Source' link at the bottom, also highlighted with a green box.

- Now, when you select the **Personalization icon**, the Data Extension selected should be

listed with available fields

- Select the attribute you wish to add

The screenshot shows the 'Edit Email' interface with the 'Content' tab selected. A dropdown menu is open, displaying a list of attributes. The attribute '08TEST UREL Mel Jones' is highlighted at the top, and 'Consent MonthZ' is highlighted in blue below it. Other visible attributes include 'Contact ID', 'Last Name', 'Email', 'Student Preferred Name', and 'Email Address'. The dropdown also includes a section for 'Profile Attributes' and a 'Choose New Data Source' link at the bottom. The background shows a rich text editor with various formatting tools and a preview of the email content.

Don't forget to test your personalization [7].
