

Scheduling Salesforce Send Emails in Automation Studio

[1]

April 15, 2026 by [jennifer.mortensen](#) [2]

IMPORTANT The following instructions do not align with available functionality. If you wish to schedule an email to Data Extension audiences well into the future, you should follow the instructions for [scheduling Data Extension Imports in Automation Studio](#) [3], then schedule your email to send in the future via Email Studio. We hope to make the below process available to all users in the future (date not determined).

Many communicators send recurring communications to the same audience. While that's a good thing, it can sometimes lead to a lot of manual work when you're updating data extensions and building seemingly endless Salesforce Send Emails in Marketing Cloud that can make your workspace seem a bit cluttered. If you're ready to streamline your communication efforts, Automation Studio can help you achieve that goal. For this example, we'll be using a recurring send to data extensions.

PRE-REQUISITE This wiki assumes that you've already read and understood [Scheduling Data Extension Imports in Marketing Cloud](#) [3]. If you haven't yet reviewed that wiki, please do so before proceeding.

1 | Selecting your Audience

The first step in automating a Salesforce Send Email is selecting and configuring your data extensions as described in [Scheduling Data Extension Imports in Marketing Cloud](#) [3]. For this example, we'll be focusing on the automated send used for the weekly CU Connections email in the Office of the President.

Once you've created your automation and have your audience data extension imports configured, your **Workflow** tab might look something like the image below. In the screen shot, you can only see four files being imported, but there are five more present below the screen line, so you can add as many as you need for your send.

You'll also notice that the **Workflow** tab divides your activities into a **series of steps**: Step one, Step 1.1, Step 1.2, and so on. This is the order in which the data extension imports will occur. If it's helpful, you can label the category of the overarching step on the canvas (in this

case, we've labeled **Step 1** "Faculty and Staff").

The screenshot displays an automation workflow interface. At the top, there are four summary boxes: "CU Connections Weekly Send", "SUMMARY" (10/30/2019 1:04 PM LAST SAVED), "WORKFLOW" (11 ACTIVITIES IN 3 STEPS), and "ACTIVITY" (10/31/2019 6:09 AM COMPLETED). Below these are three main panels. The left panel, "STARTING SOURCES", shows "Schedule" and "File Drop" options. The middle panel, "STARTING SOURCE", shows a "SCHEDULE" card for a calendar icon, with an "Edit" button and a status switch from "Active" to "Paused". Below the switch, it indicates "REPEAT: Once" and "STARTING: 10/31/2019 6:00 AM" in "(GMT-07:00) Mountain Time (US & Canada) *". A message states "The schedule has successfully completed and must be rescheduled and activated to resume." with a "Skip Next Occurrence" button. The right panel, "Step 1", shows "ANNOTATIONS" for "Faculty and Staff" and a list of four "Import File" activities: "08 UREL OG SYS Emp SUB Connections", "08 UREL OG AMC Emp SUB Connections", "08 UREL OG DUAL Emp SUB Connection", and "08 UREL OG UCB Emp SUB Connections".

2 | Adding a Wait Time to Your Automation

If you're feeling a bit nervous about your data extensions running successfully and want build time into the send to double check that there are no errors, you can do so by dragging the **Wait** option from the **Activities** menu into the canvas space designated for **Step Two** of your automaton. This means that after the data extensions have imported, the automation will wait for the amount of time you specify before moving onto the actual send.

3 | Linking Your Automation to a Salesforce Send Email

Automation Studio is designed to connect with **Salesforce Send Emails ONLY**. If you're not familiar with how to create a Salesforce Send Email, review [Marketing Cloud | Salesforce Send Email](#) [4]. Once you've selected your audience and scheduled any desired wait time, your next step is to link your automation to an already-existing Salesforce Send Email.

From the Activities menu, drag the **Salesforce Email Send Option** onto **Step 3** of your Workflow tab canvas. You'll then click the **Choose** button to select the **Salesforce Send Email** that you've already configured in Email Studio.

CU Connections Weekly Send

Select your desired **Salesforce Send Email** from the list of options that appears. Click **Done** when you are finished.

Step 3 of your automation is now complete.

4 | Scheduling Your Send

Once your audience, desired wait time, and Salesforce email send have been configured, you're ready to schedule your send. It will be like Marketing Cloud magic: your data extensions will run, your desired wait time will be built in, and your email will go to the correct, recently updated audience.

To schedule your automation and email send, click on **Configure** or **Edit** (if you've already used this automation before) under the **Schedule Starting Source**. For our example, we'll be selecting **Edit**.

Define your scheduled send time based on the parameters provided, and click **Done** when finished.

Define Schedule

i After defining the schedule and then Saving the automation, it will be paused until you set the schedule toggle to Active. The automation can still be run manually by clicking Run Once.
