Want to continually grow an audience you can email via Marketing Cloud? eComm can provide a simple subscription form with a tool called FormAssembly (example below) along with a Salesforce audience that will update automatically with subscribers (thanks to a behind-the-scenes integration). Users can drive subscriptions by posting the form to their website, and then send emails to that audience as desired.

Understand FormAssembly Subscriptions

Examples at CU

- Simple
The following forms are the most common and simple examples, collecting the minimum requirements of first name, last name, and email.

- CU Boulder: Benson Center for the Study of Western Civilization [3]
- CU Denver News [4]
- UCCS Communiqué Subscription Form [5]
- System: CU Connections [6]

The following forms collect more information than the minimum of first name, last name, and email. This additional information collected remains in FormAssembly and is not sent to Salesforce. Users can request this data via a file as needed or on a regular frequency.

- CU Boulder: Roaming Buffs Travels Program [7]
- CU Boulder: The Herd Leadership Council [8]
- CU Denver: Alumni News [9]
- CU Denver: Elevation [10]
- UCCS: Noticias sobre el programa preuniversitario [11]

A FormAssembly form is used to create new Contacts within Salesforce. Users can follow these instructions to Manage Campaign Members [12] (expand Add New Contacts section).

- Create New Contacts [13]

CU Advancement sends numerous emails each year on Giving Day. To avoid having individuals opt out of all Giving Emails (via the Giving Opportunities preference) or all communications, recipients can opt out of the series of emails for Giving Day.

These unsubscription forms integrate with Salesforce the same as subscription forms, by populating a Campaign with Campaign Members. The difference is that the sender will use the Campaigns associated Report/Data Extension as an Exclusion (rather than an Inclusion).

- CU Boulder: Buffs All In [14]
- CU Denver: Make it Real [15]

- UCCS takes its Alumni & Friends Association subscription [16] to the next level with a Journey.

Integration Details
• When an email address is provided, it matches against all email fields on a Contact in Salesforce (Email, UCD Email, UCB Email, UCCS Email, or SYS Email).
  1. If the email address is found in Salesforce, that Contact is added to the Campaign as a Campaign Member.
  2. If the email address is NOT found in Salesforce, a new Standard Contact is created (with First Name, Last Name, Email) and added to the Campaign as a Campaign Member.

This FormAssembly integration mirrors how the Cvent-Salesforce integration behaves.

Integration Details

Additional information provided while subscribing is NOT sent to Salesforce. This data lives in FormAssembly and can be provided on a regular cadence if desired.

<td>The user could request the data from eComm, process it, and send it to Ascend to be created/updated in Salesforce. Must be familiar with their standards and processes.</td>
<td></td>
</tr>
</tbody>
</table>

**STEP 1 | Create Salesforce Subscription Campaign**

The eComm specialist must create a Campaign in Salesforce with a Subscription Form type to start the process. That URL will need to be provided when a subscription form request is submitted (step 2) to the system office.

- Salesforce >> Select **Campaign** tab >> Create **New** Campaign in the top-right >> Check the **Subscription Form** radio button
Name Campaign per convention below

Naming Convention

- Subscribe Campaigns | **OX_Subscribe_Name/Title**
  - ? with X indicating your campus number
- Unsubscribe Campaigns | **OX_Unsubscribe_Name/Title**
  - ?? with X indicating your campus number
- Check the Active checkbox >> Select Save button in the bottom-right

- **Share with Users/Public Groups as needed** & create an audience with CAN-SPAM compliance (Report/Data Extension)
  - Run a Report to see if anyone who subscribed to a certain communication has opted out of the broader email preference category. The user can reach out personally to encourage they opt back in - otherwise, they will not get the
commercial emails).

- You will need to provide the Subscription Campaign URL to request a subscription form (step 1).

**STEP 2 | Submit Request**

- **Populate columns A-P** [23]
  - Provide the Campaign Name and URL from Step 1 (column H & I)
- **Submit a help ticket** [24] and anticipate a 5 day turn-around for simple forms.
  - Requests with lots of customization or back-and-forth with embedding will require an extension.

**Populate Request Details | Columns A-P** [23]

**STEP 3 | Launch & Test**

Once the subscription form is created, you will be able to test and review it. Once satisfied, you or your user can post the URL publicly and start collecting subscribers.

- Melanie Jones will contact you within 5 days of submitting the request with a live URL to the subscription form (column N)
- **The requester will need to complete a test** (column O) by subscribing and confirming the Salesforce Contact populates in the Campaign as a Campaign Member (created in step 1).

**Integration Details**

- When an email address is provided, it matches against all email fields on a Contact in Salesforce (Email, UCD Email, UCB Email, UCCS Email, or SYS Email).
  1. If the email address is found in Salesforce, that Contact is added to the Campaign as a Campaign Member.
  2. If the email address is NOT found in Salesforce, a new Standard Contact is created (with First Name, Last Name, Email) and added to the Campaign as a Campaign Member.

This FormAssembly integration mirrors how the Cvent-Salesforce integration behaves [17].
