Get the most out of class, or work, by asking better questions [1]

March 6, 2023 by Employee and Information Services [2]

Questions develop at many points in your academic career, but asking the most helpful questions at the best time is a skill we all can learn. In "Asking Productive Questions [3]" with Dave Crenshaw, you will learn all about how you can ask better questions that lead to more powerful answers in just 27 minutes.

A lot of the time, our problems aren't answered with a single question. This course will let you know how to keep asking good follow-up questions so you can get to the answer that will yield the most results. Listening to and understanding the answer is also an important part of these interactions, and this course will give you insights into how to be a better listener when you ask questions.

This course will also help teach you about when to hold your questions so you leave room for the answer to be revealed or avoid distracting your team or yourself from being productive. If you're struggling with a class or a group project, this course can help you learn about how to structure better questions so you can get the help you need.
