

Light yellow prompt pages indicate QA ^[1]

October 4, 2017 by [Carl Sorenson](#) ^[2]

The CU-Data QA environment, where testing occurs, looks a lot like production. So now we have configured m-Fin reports so that the first prompt page will be light yellow when in CU-Data QA.? This way you have a consistant cue to remind you when you are running a test version of a report.

As always, the server name appears in the lower left corner of each output page. The QA server is cu-data.qa.cu.edu. The light yellow prompting is something more we have added, to make the distinction between QA and production a bit more obvious.

The screenshot shows the 'm-Fin LAUNCH' web application. The background is light yellow. A red box with the text 'Light yellow indicates QA' points to the yellow background. The interface includes a search bar, a sidebar with icons, and a main area with form fields for FISCAL YEAR, ACCOUNTING PERIOD, SPEEDTYPE, ORG | ORGCODE, PROJECT, and PROJECT AWARD CODE. A 'Clear' button is also visible.

Light yellow indicates QA
