

## Use The Enter Key For Speedtypes <sup>[1]</sup>

August 9, 2011 by [Carl Sorenson](#) <sup>[2]</sup>

The screenshot shows the 'SPEEDTYPE' search interface. At the top, a red text annotation reads 'Instead of mouse-clicking this, use the Enter key.' with a red arrow pointing to the 'Search' button. The 'Keywords:' section contains a text box with '11020234' and the 'Search' button. Below this is an 'Options' dropdown. The 'Results:' section is empty, with 'Select all' and 'Deselect all' links below it. To the right of the results is a 'Choice:' section, also empty, with 'Select all' and 'Deselect all' links below it. Between the results and choice sections are 'Insert' and 'Remove' buttons. At the bottom left, there is a list of checkboxes: 'A -- ACTIVE' and 'I -- INACTIVE', both checked, with 'Select all' and 'Deselect all' links below them. A 'Resize' button is located to the right of this list.

Here is a tip for most m-Fin reports, those that accept speedtype on the first page of prompting. It's a little thing, but I use it many times a day. You can enter one speedtype, or enter several separated by spaces. Then, instead of clicking the **Search** button with your mouse, use its keyboard shortcut: hit the enter key.
