

Code42 CrashPlan has your back(up) ^[1]

April 16, 2020 by [UIS Communications](#) ^[2]

We want to make sure your information is secure, so every device we image comes with Code42 CrashPlan installed. Accidents happen and no technology is perfect, so CrashPlan is set up to run continually in the background, securely backing up your device so that data can be easily recovered should anything be lost. (To give you an idea of how much data this is protecting, CrashPlan is backing up 675 devices, consuming a total of 32.8 TB of storage and 491.5 GB of cloud storage for System Administration and Advancement!)

As an additional security measure, we are requesting that **all users confirm that Code42 CrashPlan is properly installed** and backing up your device by following this [how-to guide](#) ^[3].
