

Keep university information secured by using your CU issued device ^[1]

September 3, 2020 by [UIS Communications](#) ^[2]

Only university-provided computers, including mobile computing devices, should be used to access or handle sensitive university information. Do not allow members of your household to access your university-provided computer, as they may unknowingly put your computer at risk. Always lock your computer when stepping away from it, just as you would in the office.

If you must use a personal computer, it is recommended that you use remote desktop to connect to your university-provided computer. Visit the [UIS Service Desk website](#) ^[3] for guides on VPN, remote desktop and collaboration tools.
