Understand your VPN choices [1]

December 10, 2020 by UIS Communications [2]

There are several choices when you log into the VPN. Do you understand which VPN you should be connecting to?

Once opening Cisco AnyConnect Secure Mobility client, the auto-filled option is **vpn01.cu.edu** ; most users connect to this option. In the case that this connection fails, users can connect to the backup address **vpn02.cu.edu**.

Once you have made this selection, there are three additional choices: **CU-System-VPN, FullTunnel and MFA**. The default option, and the one most employees, should use is the CU-System-VPN. Not all users need the same access – the other two options are specific to campus resources some employees require for their jobs.

Use the service desk how-to-guide [3] for more information on these options and how to connect to the VPN. Select "VPN Options" at the top to read about the VPN options listed above.
