Update your browser [1]

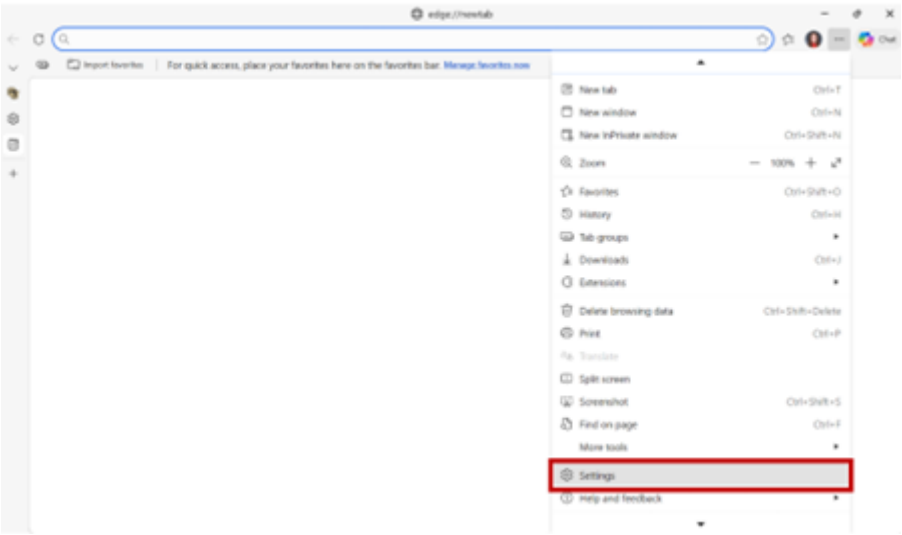

May 14, 2026 by ES and UIS Communications [2]

An out-of-date browser is one of the most common causes of broken pages, login problems and security vulnerabilities. Most browsers update automatically when you fully close and reopen them — but if you keep many tabs open and rarely restart, updates can sit unfinished for weeks. Here's how to check manually in Edge, Chrome and Firefox.

Microsoft Edge

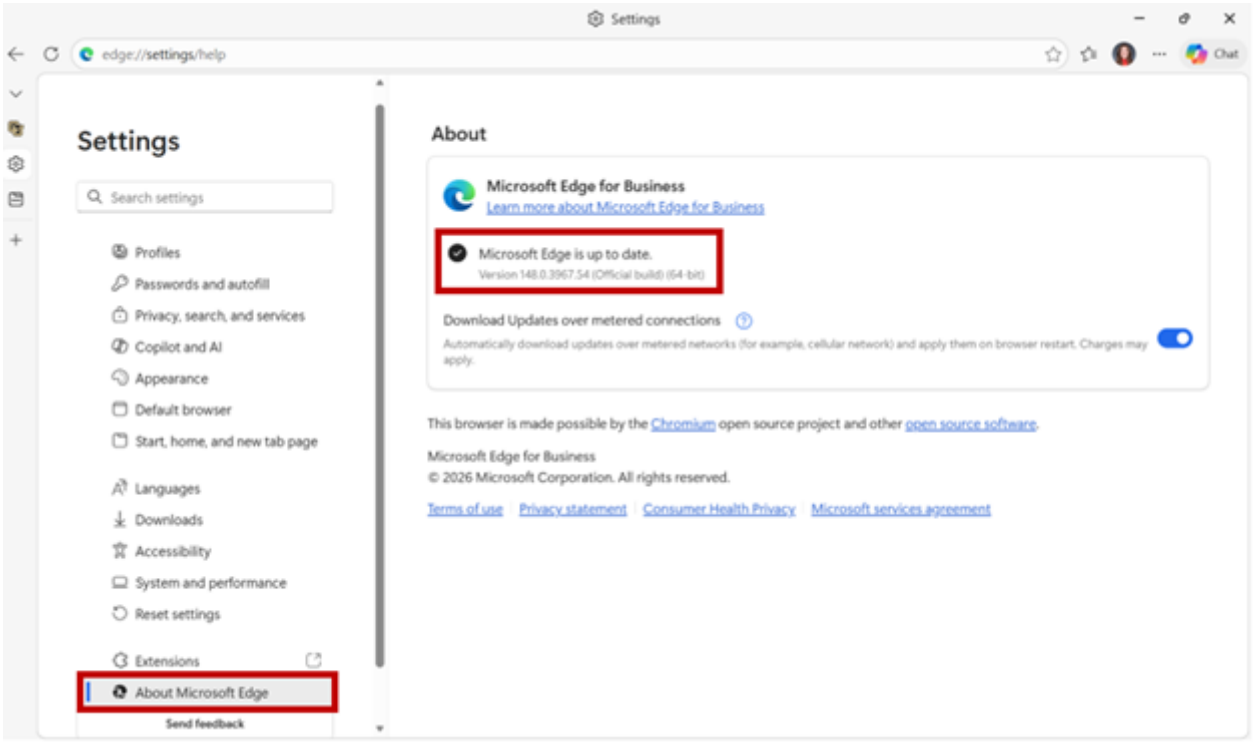

1. In Edge, select the **settings and more** icon in the top-right corner.

2. Select **Settings**.

3. From the left-hand menu, select **About Microsoft Edge**.

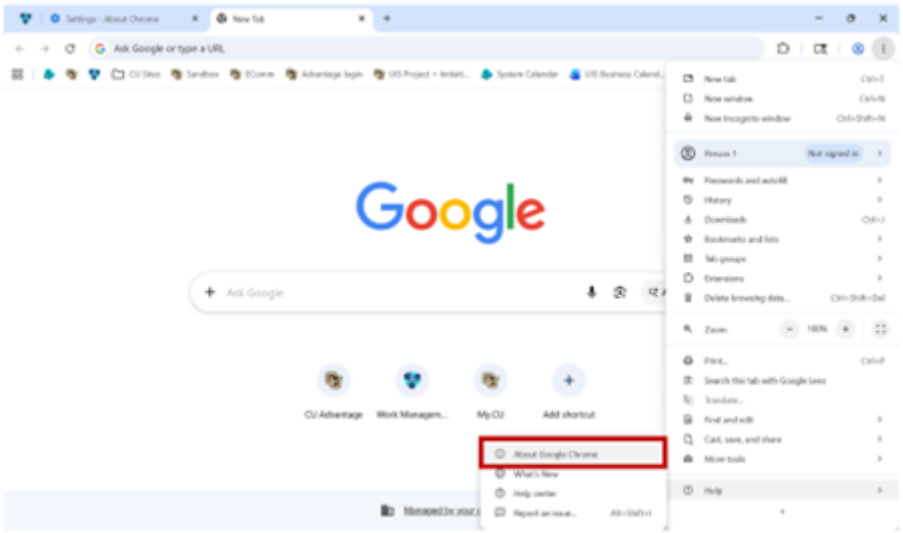

4. Edge will automatically check for updates. If one is available, select **Download**, then **Restart** to finish installing. If the page reads "Microsoft Edge is up to date," no action is needed.

Google Chrome

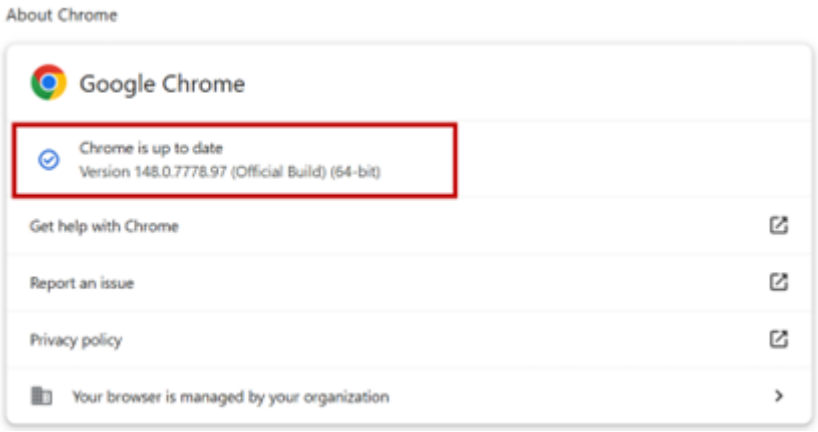

1. Open Chrome. If an update is waiting, a colored dot or the word **Update** will appear on the three-dot menu in the top-right corner.

2. Select the three-dot icon, then select **Help**, **About Google Chrome**.

3. Chrome will check for updates and download them automatically.

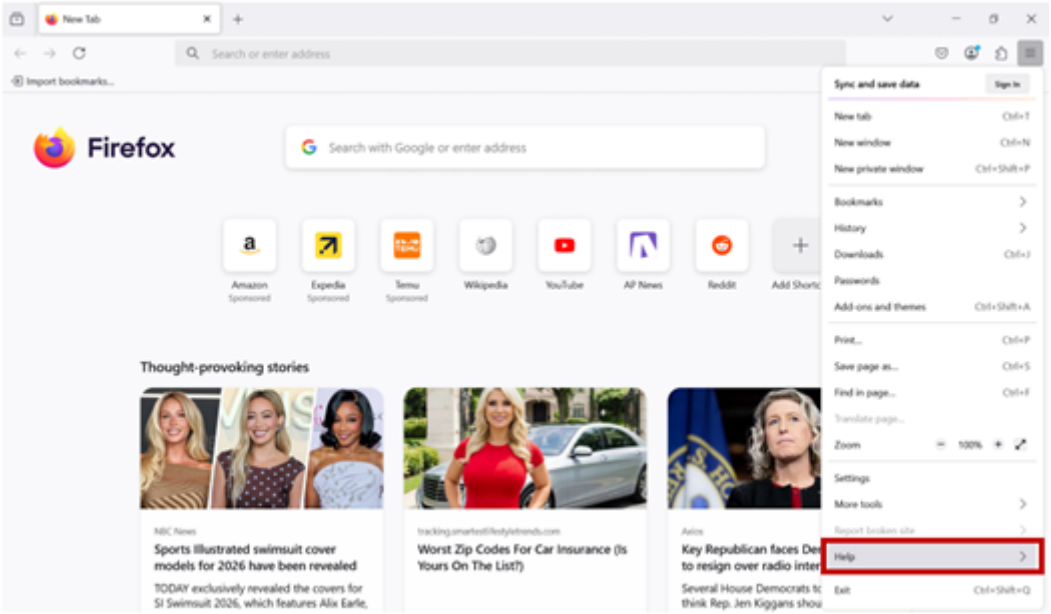

4. When the download finishes, select **Relaunch** to apply the update.

Firefox

1. Select the **Menu** icon in the top-right corner.

2. Select **Help**, then **About Firefox**.

3. Firefox will automatically check for updates and download any it finds in the background.

4. When prompted, select **Restart to Update Firefox**. If the window reads "Firefox is up to date," no action is needed.

When in doubt, restart

If you have installed an update, but websites still are not working, fully close and reopen the browser to ensure the new version is loaded. If issues continue, contact the UIS Service Desk [3] at 303-860-4357 or help@cu.edu [4].
