Campus Solutions enhancements coming Feb. 19 [1]

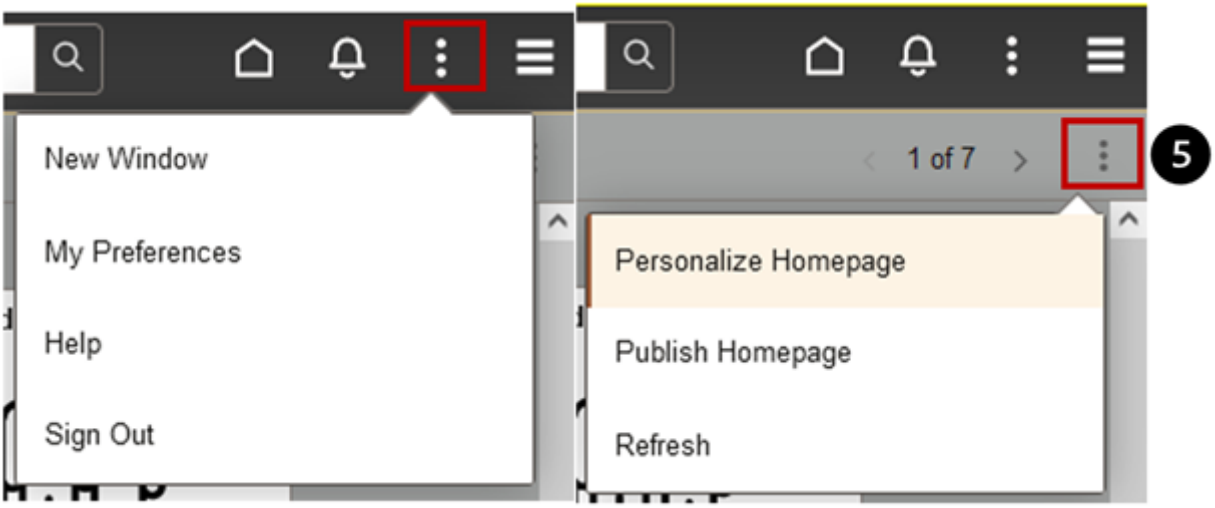

January 29, 2024 by ES & UIS Communications [2]

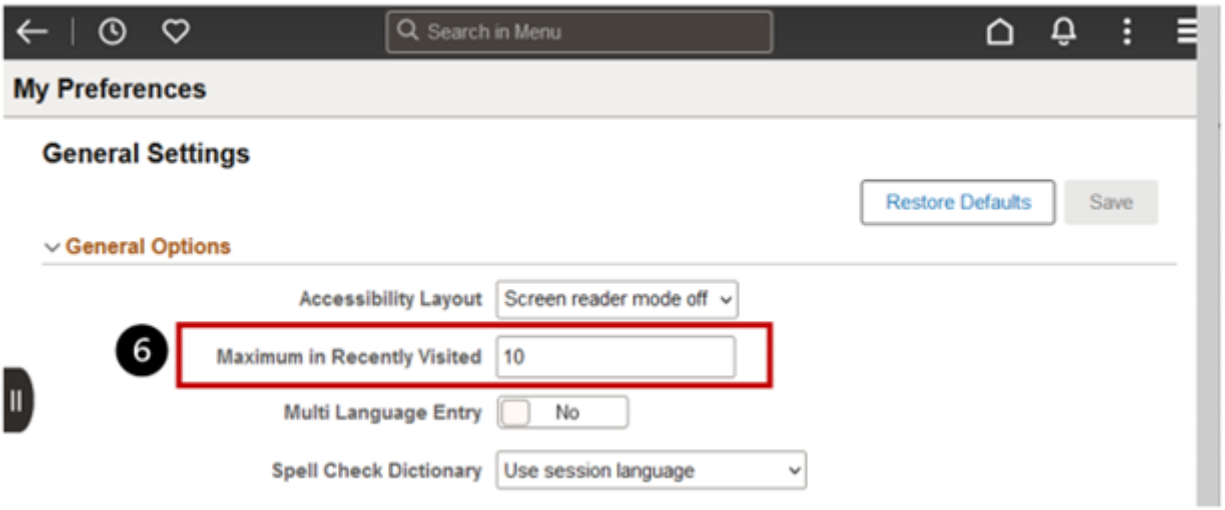

Beginning Feb. 19, Campus Solutions users may notice several small changes. Highlights include changes to the user interface, search pages, and the Process Monitor.

1. The **Quick Access Bar** (Recently Visited and Favorites) is relocated to the global banner, now available on all pages, not just homepages.
2. On all pages, **page labels** now appear on a banner below the global banner and are left justified. Together the two banners allow for a consistent look regardless of the type of page.
3. The relocation of the page label creates space for **Global Search** on the global banner, now available in expanded form on all pages.
4. The Home and Notifications **icons** in the global banner are simplified.

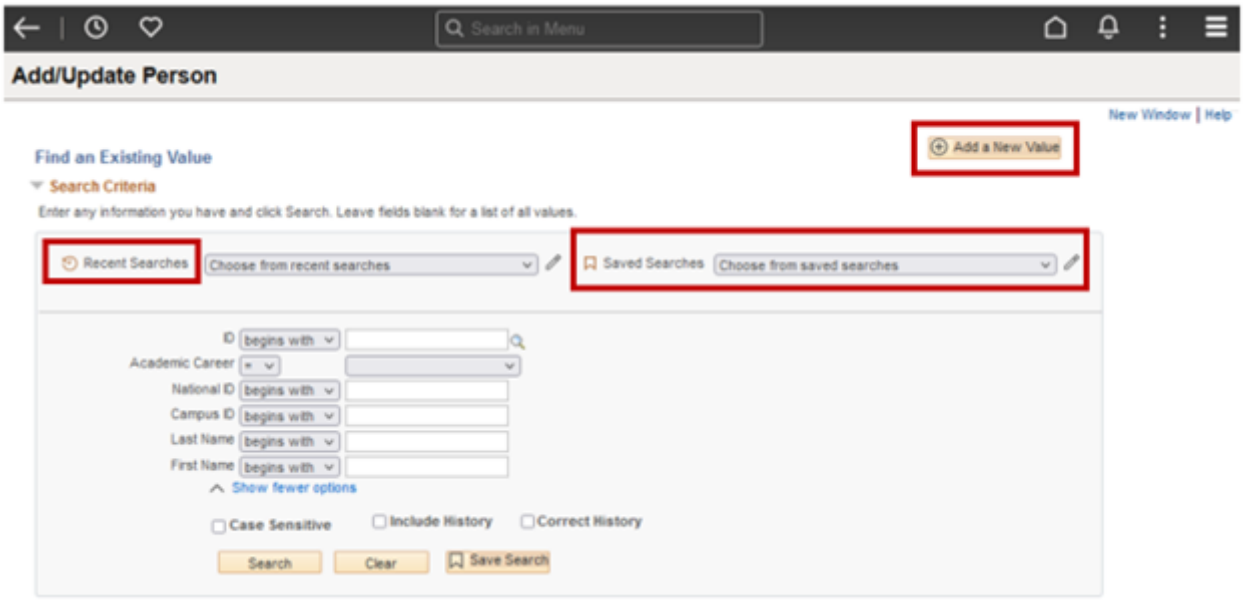

5. All actions were previously available through the **Actions List** (vertical ellipse) on the global banner. Now, system-level actions remain available from the **Actions List** on the global banner and page-level actions are relocated to the more **Actions** menu (the lower vertical ellipse) on the page banner.

6. Users may now set the number of items that appear under **Recently Visited** in **My Preferences** (**Maximum in Recently Visited** under **General Options**). The maximum can be set up to 30. The default is 10.

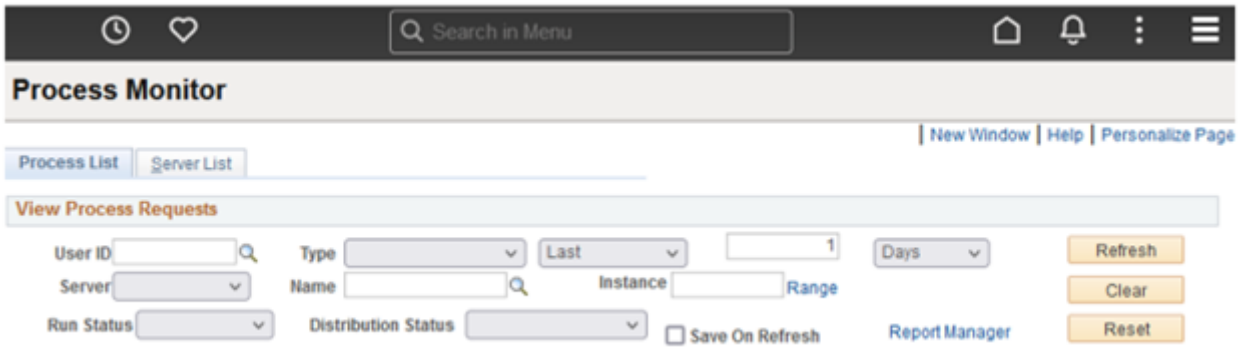

Changes to component search pages

Search pages have a new layout and include functional enhancements:

- A user's five most **Recent Searches** will be retained in any given component and are now search criteria options.
- While Saved Searches are not new, **Saved Searches** are now more prominently displayed on search pages. Users can save up to five searches for each component.
- **Add a New Value**, which users with access click to create a new record or run control, is relocated to a button in the top right.
- The number of search result rows returned is now limited globally to 800.
- The search results grid has changed and will initially display the first 10 results by default.

Process Monitor has a few changes.

- **All** is a new option in the duration drop-down menu with Date Range or Last.
- The **Instance Field** now includes a **Range** hyperlink users may click to enter a range of instance values.
- **Run Control ID** is a new column field in the Process List results grid.

Questions?

Send questions and/or feedback to the UIS Service Desk [3].
