Slate connects the Student Journey at UCCS [1]

January 29, 2026 by ES and UIS Communications [2]

The Slate implementation at the University of Colorado Colorado Springs (UCCS) has been successfully completed, marking a major milestone in admissions, advising and student communications.

UCCS led the primary configuration and deployment of Slate, including application processing, orientation registration, advising workflows through Student Success Connect and automated communications. UIS supported the project through system integration and data support, helping ensure continuity of services and successful data migration, including historical case notes.

"With the completion of the Slate implementation, we can now connect prospect, applicant and enrolled student data in one system, improving how we support students from recruitment through enrollment," said Wendi A. Clouse, chief strategist for enrollment and operations, Division of Enrollment Management and Student Affairs, UCCS.

Previous applications, Student Support Network and Admissions Connect, were run on Salesforce for admissions and advising. Applications are now processed in Slate, orientation registration and support are live, advising is active through Student Success Connect, and automated communications are in place for undergraduate prospects, applicants, admits and orientation candidates. Historical case notes were successfully migrated to Campus Solutions as part of the transition.

Next steps include faculty training for early alerts, exploration of Canvas gradebook integration and continued development of forms and workflows to support colleges and departments.
