UIS at the forefront of Oracle software innovations [1]

March 15, 2019 by UIS Communications [2]

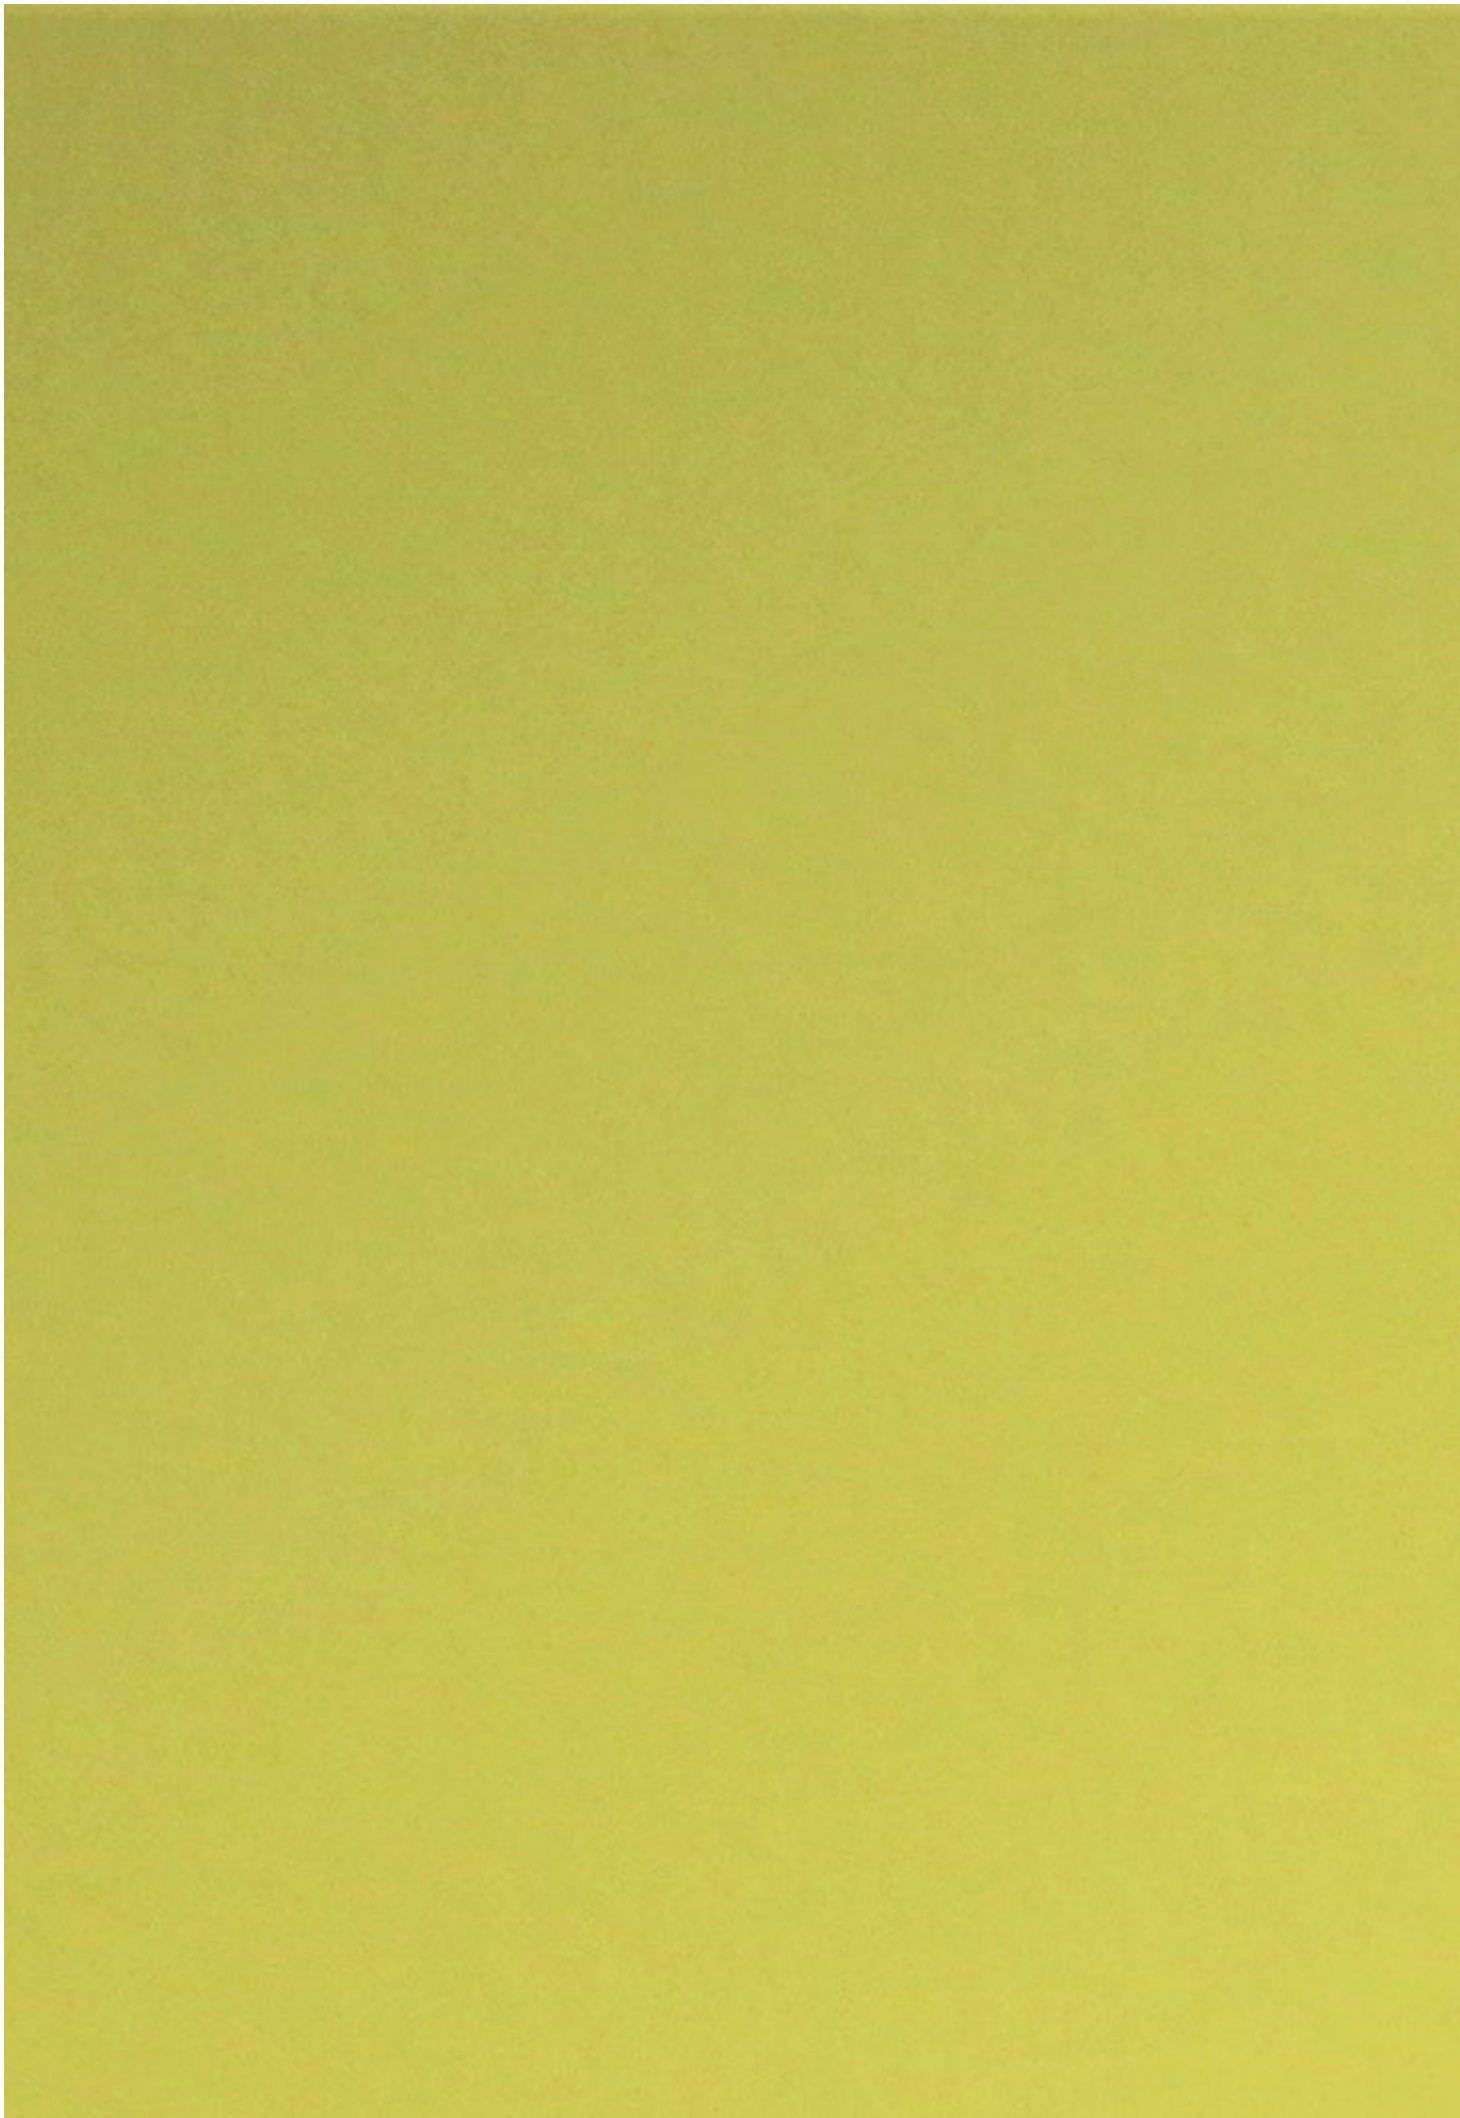

The Higher Education User Group (HEUG) is a worldwide community for sharing knowledge and practices that maximize institution investment in Higher Education Information Systems. HEUG allows members to connect and build relationships across the globe to explore different, proven approaches and best practices for designing, configuring and deploying software to better serve their constituents.

HEUG's advisory groups are composed of representatives from different institutions with expertise in various product modules and technical areas within the world of Oracle application software. The responsibilities of these groups include facilitating communication about specific product features, problems, and opportunities; advocating to Oracle on behalf of the user community for enhancements, new functionality, resolutions to problems, and more.

The University of Colorado has several representatives on these committees, including three from UIS. Learn more about each UIS representative below:

Being a part of the HEUG advisory groups makes Amberly, Srikanth, and Mayank better members of the UIS department by allowing them to:

- Keep CU up-to-date on technology and advancements by getting information about new tools, products, and features from Oracle before they are released.
- Have a platform to display CU's technical ability and vision within the higher education community.
- Learn how other organizations deal with specific problems and their solutions.

Having these team members representing on HEUG advisory groups and focus groups puts UIS at the forefront of Oracle software innovations.
