Faculty win: How to integrate LinkedIn Learning into your courses [1]

September 8, 2025 by ES and UIS Communications [2]

As digital tools continue to reshape the educational landscape, University of Colorado faculty have a powerful ally in LinkedIn Learning—a platform that goes beyond professional development to become a dynamic teaching resource. The course, "Teaching with LinkedIn Learning [3]," is designed to help educators harness the full potential of this tool in their classrooms.

Whether you're teaching soft skills, technical software or anything in between, LinkedIn Learning offers a vast library of content that can complement and enhance your curriculum. But the real value lies in how faculty can customize and curate this content to meet their students' needs.

In this course, the LinkedIn Learning team walks educators through:

- Creating custom playlists tailored to course objectives
- Embedding digital resources like videos, PDFs and links directly into your learning management system
- Empowering students with self-paced learning and tech-enhanced engagement
- Ensuring accessibility through closed captioning and inclusive design practices

The course explores real-world use cases that demonstrate how LinkedIn Learning can streamline lesson planning, consolidate resources and even archive materials for future semesters.

Whether you're looking to modernize your teaching methods or simply make your content more accessible and engaging, this course is a practical guide to integrating LinkedIn Learning into your academic toolkit.
