Introduction to Resource Hub [1]

We have created a Resource Hub [2] for the latest journal articles on technology for cognitive disabilities. This page compiles cutting-edge research exploring how technological advancements are enhancing cognitive rehabilitation, communication, and daily living for individuals with cognitive impairments. Whether you are a researcher, caregiver, or someone impacted by cognitive disabilities, you will find valuable insights into innovative tools like virtual reality, computer-assisted therapy, and assistive devices.

These are just some of the articles that caught our attention. We will be adding more on a regular basis, so please check back later for new additions.

Contact Cathy.Bodine@cu.edu [3] with any article recommendations.

Groups audience:
Coleman Institute for Cognitive Disabilities
