CU Innovation & Efficiency Awards: Selection Process [1]

How are submissions judged?
Submissions are reviewed first by the CU I&E Program Manager [2], who will contact the submitter with any questions, and then by the selection committee (campus controllers/deputy controllers and University Controller), who will determine if the submissions meet program criteria. Those that do are posted on the CU I&E website [3].

At the end of the program submission period, the selection committee again reviews all posted submissions in order to identify a group of semi-finalists. The semi-finalists form the pool for award consideration.

How are awards determined?
Semi-finalists are notified after the submission period ends, and invited to participate in further recognition activities as part of the awards determination process:

- a short video interview (in-person or online), and,
- a call-in question-and-answer period session with the voting body.

Awards are decided by a larger voting body comprised of the selection committee and additional representatives from CU System Administration and the campuses.
