Operating Model/Execution Path [1]

The Operating Model establishes clear accountability, responsibility and escalation paths for making decisions about data.

This structure is intended to foster data governance enablement, allowing leaders and analysts to support CU's Data Governance efforts. All governance issues feed into CU's IT Governance Committee [2] as an escalation point.

Accessible PDF: Read the accessible PDF version of the Data Governance Operations Model [3].

Operating model: Click the report below for a full screen view.

See the Data Governance website [4] for a complete list of business domains.

Groups audience:
Data Governance
