

## **Production Services** <sup>[1]</sup>

### **What We Do**

Production Services sets up and monitors all of the batch processing for enterprise systems across all campuses. This includes uploading data into the database for use by the various business applications, enabling reporting and access to information. We also handle moving validated data from the development to production environments.

### **Services Performed**

Business professionals are available 24/5 Monday through Friday (except holidays) to support production processing. During those times they will set up and schedule jobs using the automated scheduler and set up output for distribution or online viewing through the automated output management software.
