

TARGET

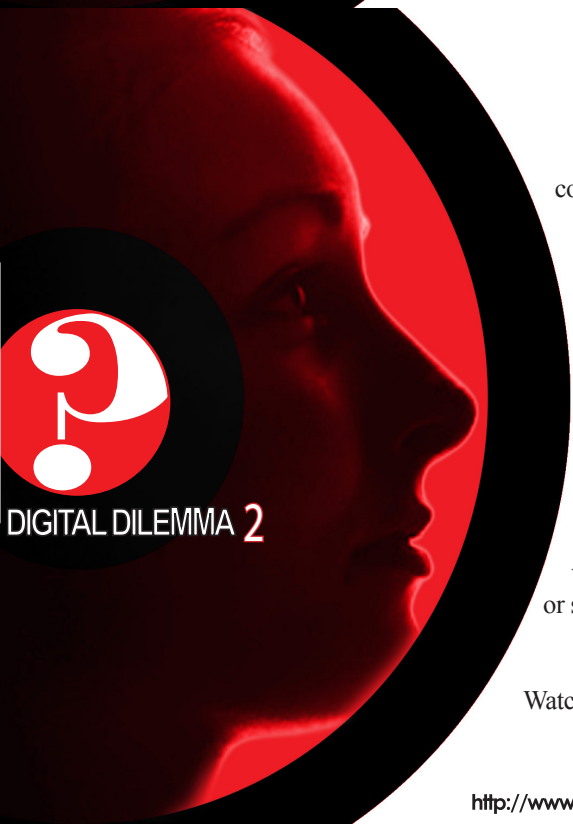

Kerry wondered if the information on her computer was worth anything. After all, what criminal would be interested in her photos and music? After thinking it through, she realized that cyber criminals could use her information or her computer to navigate through to even more sensitive and valuable information.

As a result, she took action to protect herself, her family and their information.

She made sure she followed security best practices that she read about on CU's website, and she is now suspicious of offers or scams that are unexpected or too good to be true.

Watch for the next Digital Dilemma episode in a new digital post card, coming in April!
